Permanent Hair Reduction Special...

IPL Allegro Acne Treatment

Along with Permanent Hair Removal treatments, Proskin Clinic also offers Allegro Acne IPL Treatment!

Whilst mild to moderate inflammatory acne is defined as a medical condition, clients often present with the side effects of acne seeking skin rejuvenation treatment. It has been shown that broad-band intense pulsed light can relieve many of the symptoms of this type of acne and help in its management to avoid subsequent acne scarring.

Early inflammatory acne outbreaks are characterized by the pilosebaceous duct becoming infected by Propioni Bacterium. These bacteria are capable of spontaneously producing high concentrations of porphyrins, which are complex light sensitive compounds that are normally used in the body as a component of haemoglobin. They can absorb energy from light and transfer this energy to surrounding oxygen molecules and toxic oxygen species such as singlet oxygen and free radicals are then formed. These chemicals are very reactive and can destroy the acne bacteria.

Appropriate IPL ensures delivery of sufficient light energy to provide optimum effectiveness in stimulating the body's own immune system response to fight the bacteria.

WHAT TO EXPECT:

A mild sunburn like sensation is expected. This usually lasts 2-24 hours, with mild swelling and redness can come up which is temporary. 5-8 Treatments are required at 2-4 weekly intervals.
